Connect Your AI Assistant to Concentriq LS

Concentriq MCP (Alpha) lets your AI assistant work with your Concentriq LS data (slides, metadata, annotations and analysis results) in plain language. Your assistant only sees what your own Concentriq LS account can access. For research use.

Before you start

- **Concentriq LS 5.1.0 or later**, with your organization's sign-in (for example, Okta) set up for Concentriq MCP. Your IT administrator does this once with Proscia.

Connect

Claude

On Claude Team or Enterprise, an Admin must first add the connector under **Organization settings > Connectors > Browse connectors**. See the admin setup guide (sign in required).

1. In Claude, go to **Settings > Customize > Connectors**.
2. Find **Concentriq LS** and click **Connect**.
3. Enter your Concentriq LS URL (e.g. https://yourcompany.concentriq.proscia.com).
4. Sign in with your organization account.

To disconnect, go to **Settings > Customize > Connectors**, select Concentriq LS, and disconnect.

What you can ask

- **Find things:** *"Find all H&E slides in repository [ID] scanned after January."*
- **Get oriented:** *"What repositories can I see? Which one has the most slides?"*
- **Look up what's already recorded:** *"List the annotations on image [ID] with their areas."*
- **Create annotations:** *"Annotate the regions you just described."*

Good to know

- **Review AI output.** Summaries, descriptions and annotations are generated by AI and can vary between requests.
- **Some tools may be unavailable** depending on your deployment. For example, some tools require Concentriq Embeddings.
- You may be asked to **sign in again** about every 30 days.

Troubleshooting

- **"User is not assigned to the client application":** ask your identity provider admin to assign you to the Concentriq MCP app.
- **"The Concentriq URL is not recognised":** check that you have signed in to Concentriq LS at least once, and that your Concentriq LS email matches your organization email.
- **Sign in fails for everyone at your organization:** your sign-in app's settings may have changed (e.g. an expired client secret). Ask your IT admin to contact Proscia Support.
